

## Product Information

### CHILD GUARD

The CHILD GUARD is a wireless electronic monitoring system strapped onto a child or pet which will activate an alarm when wrist alarm is emerged into water.

#### Features:

- 100Db alarm
- Base station can be used with a number of wristband alarms.
- Totally portable
- Wrist alarm is locked with a key for added security
- Meets EU standards

This unit consists of a base station, a wrist band with fish / dolphin, a key, 3 pin electrical plug, FREE bag.

The base station works on either a 9V battery or on electricity. You can even use a rechargeable battery for the base station.

The wrist band is locked onto the child's arm with a key. Once the fish / dolphin gets wet, then the base station goes off. The base station has a siren and a light. The siren screams and the light flashes at the same time, hence giving you a double warning system.

If you have more than one child, then you just need to purchase additional wrist bands as more than one band works on a base station.

This unit has been quality tested by us at our warehouse, however we recommend for your own safety and that of your child that this unit is tested on a continuous basis.

#### **PLEASE NOTE:**

These devices are safety alarm systems and **NOT** life saving devices.

These devices are not intended to replace any other safety considerations such as adult supervision, lifeguards, fences, gates, pool nets etc.....

SOLARIUM CONTROL SYSTEMS are the suppliers of Solarium pool autofillers, Solarium solar controllers, Rollastat pool covers and wireless switches for all pool products. Please contact Darren on 082 928 7299 for more information and to place orders.
