

Product Information

POOL PROTECTOR

The POOL PROTECTOR is an electronic monitoring system that automatically sounds an alarm when a child or pet falls into a non-supervised pool.

Features:

- 100Db alarm
- Fixture to pool or pond
- Comes with in-house remote receiver
- Battery powered with low battery indicator
- Tamper proof
- Easy to use
- Meets EU standards

The alarm consists of the "L" shape unit, remote sensor with an electrical 3 pin plug, installation screw, handle for "L" shape unit and magnet.

The alarm is installed on the side of your pool, with the longer piece of the "L" in the water. This unit works off 2 x 9V batteries. The remote sensor is installed inside the house. Same works either off a 9V battery or electrical power.

When a weight of 3kg's and heavier falls into the pool, an underwater ripple is formed. As this ripple travels underwater, the plunger in the unit picks it up, moves and sounds an alarm. The remote sensor inside the house goes off simultaneously with the unit in the pool, hence giving you a double warning system. The Creepy or wind does not affect the alarm. If necessary, the sensitivity of the alarm can be changed. This is done by adjusting the screw above the plunger.

This unit can also be put to sleep for when you want to either swim or clean the pool. This is done by moving the magnet in front of the control board on the "L" shape unit. The unit will beep to tell you it is in sleep mode. Once you have finished swimming or cleaning the pool, and the water has settled down, the alarm will reactivate itself. The alarm also advises you when the batteries are going flat. It starts to beep in intervals. Once it starts to hum, then the batteries are basically on their last leg and need to be changed.

PLEASE NOTE:

These devices are safety alarm systems and **NOT** life saving devices.

These devices are not intended to replace any other safety considerations such as adult supervision, lifeguards, fences, gates, pool nets etc.....

SOLARIUM CONTROL SYSTEMS are the suppliers of Solarium pool autofillers, Solarium solar controllers, Rollastat pool covers and wireless switches for all pool products. Please contact Darren on 082 928 7299 for more information and to place orders.
